

National Enzymes

Enzymes Plus: Digestive enzymes, naturally chelated trace minerals and Vitamin C for cats and dogs. 8 oz.

Digestive Enzymes:

Protease – breaks down proteins

Amylase – converts sugar to starch

Lipase – breaks down fat

Cellulase – contains multiple enzymes to improve the breakdown of cellulose and high fibre foods

Kelp Extract which is a source of naturally chelated trace minerals.

Whole food sources of Vitamin C including Acerola (West Indian cherry fruit, thought to be the richest natural source of Vitamin C), Rose Hips (fruit and seeds of the Dog Rose) and bioflavonoids (found in higher green plants and known to enhance the effect of Vitamin C in therapy).

Suggested Use: Use with commercial pet foods or home prepared diets.

Cats: 1/8 to 1/4 tsp. mixed with food at each meal.

Dogs: 1/4 to 1/2 tsp. per cup of food at each meal.

Benefits: Digestive enzymes increase the absorption of nutrients from commercial foods and home prepared diets, supplement the normal enzymatic activity of the body and prevent gastrointestinal problems caused by food intolerance, allergy, illness, stress and use of antibiotics.

Vitamin C enhances immune function, improves overall physical well being and reduces the incidence and severity of age related illnesses.

Kelp extract is the best source of trace minerals such as copper, iodine, iron and zinc.

Enzymes pH: In addition to digestive enzymes (noted above), this formula contains nutrients that promote healthy urinary function.

Enzymes pH contains cranberry extract to prevent bacteria from growing in the urinary tract and causing infection. Vitamin C and an amino acid, DL-methionine, both acidify the urine to keep excess minerals excreted through the kidneys from forming struvite crystals.

Good Digestion: In addition to digestive enzymes (noted above), Good Digestions contains probiotic cultures, FOS and greens.

Probiotics are needed to repopulate the digestive tract with beneficial bacteria killed by stress, illness or antibiotic therapy.

FOS (fructoogliosaccarides) are nutrients to feed the beneficial bacteria.

Green grasses provide vital antioxidants, vitamins and minerals
